der klimawandel ist unumstritten doch wie gehen wir mit dem kohlendioxid um das als sündenbock für die globale erwärmung gilt dieses buch bietet einen kritischen blick auf co₂ und seine rolle in der aktuellen klimadiskussion es beleuchtet den einfluss der land und forstwirtschaft die bedeutung der baumartenwahl bei den aufforstungen die herausforderungen bei der nutzung von biogas und wasserstoff und hinterfragt die rolle fossiler brennstoffe sie erfahren wie waldbrände und bodennutzung das klima beeinflussen und welche methoden tatsächlich zur reduzierung von co₂ beitragen können auch wird aufgezeigt warum das co₂ nicht nur als umweltproblem sondern auch als essenzieller bestandteil für das leben auf der erde betrachtet werden sollte ein ratgeber für alle die den komplexen zusammenhang zwischen co₂ und unserem planeten verstehen möchten

our objective in compiling a series of chapters on the chemical ecology of insects has been to delineate the major concepts of this discipline the fine line between presenting a few topics in great detail or many topics in veneer has been carefully drawn such that the book contains sufficient diversity to cover the field and a few topics in some depth after the reader has penetrated the crust of what has been learned about chemical ecology of insects the deficiencies in our understanding of this field should become evident these deficiencies to which no chapter topic is immune indicate the youthful state of chemical ecology and the need for further investigations especially those with potential for integrating elements that are presently isolated from each other at the outset of this volume it becomes evident that although we are beginning to decipher how receptor cells work virtually nothing is known of how sensory information is coded to become relevant to the insect and to control the behavior of the insect this problem is exacerbated by the state of our knowledge of how chemicals are distributed in nature especially in complex habitats and finally we have been unable to understand the significance of orientation pathways of insects in part because of the two previous problems orientation seems to depend on patterns of distribution of chemicals the coding of these patterns by the central nervous system and the generation of motor output based on the resulting motor commands

this up to date text book is entirely different from most standard textbooks in its approach to the fascinating subject of inorganic chemistry it teaches chemistry in a structured way with reference to concepts theories and principles
